

PAVAN KALYAN VALISETTI

Software Developer
Hyderabad, Telangana

+91 6304672477 · vallishettipawan@gmail.com · linkedin.com/in/pavankalyan11011 · github.com/pavankalyan11011

SUMMARY

- Software Developer building production web systems across frontend and backend. Experienced in React, Redux / Redux Toolkit, Node.js / Express / Feathers, Java / Spring Boot, REST APIs, JWT, and PostgreSQL. Designed and shipped RecoverAI — a microservices payment-recovery platform with Razorpay webhooks, Payment Links, and multi-provider LLM analysis. Currently contributing to Amealio (consumer, merchant, admin apps): translating Figma to UI, integrating API contracts, and delivering features in agile delivery with Git/Jira.

EXPERIENCE

Software Developer Intern — Envisionard (Amealio) Jan 2026 — Present

- Own feature delivery across a multi-tenant hospitality SaaS: consumer web, merchant dashboard, and super-admin — React UI, Redux state, and REST/JWT contracts.
- Implement design-to-code from Figma: reusable components, responsive layouts, form validation (Formik/Yup), and route-level auth guards.
- User app: Shipping discovery, menu/ordering, seating, experiences, and profile flows with React 18, Redux Toolkit, React Router v6, MUI, and redux-persist.
- Merchant / Admin: Built operational modules (seating, orders, experiences, settlements, wallet, onboarding, reporting) with thunks, role-based routing, and shared error/loading patterns.
- Integrate Node.js, Express, and Feathers.js APIs with axios; wire Socket.io for real-time updates across Dev/QA/UAT.
- Collaborate via GitHub PRs, code review, and Jira; use Cursor for faster prototyping/refactors without sacrificing readability.

Java Full Stack Developer (Training) — Websoft Technologies Feb 2025 — Dec 2025

- Built full-stack foundations in Java, Spring Boot, React, JWT/RBAC, and relational DBs (Oracle, PostgreSQL, MySQL).
- Designed and tested REST APIs with Postman/Maven; practiced modular layering, client-server integration, and Git-based workflows.

PROJECTS

RecoverAI | React, Spring Boot, Razorpay, Groq/OpenAI/Gemini, PostgreSQL 2026

github.com/pavankalyan11011/RecoveryAI

- Engineered an AI revenue-recovery system that turns failed Razorpay checkouts into recoverable cases via Payment Links and optional SMS/email notify.
- Split architecture into customer-service and merchant-service (Java 21 / Spring Boot 3), each with its own Postgres + JWT — no shared DB; Razorpay is the integration bus.
- Implemented signed webhooks (payment.failed, payment.captured, order.paid, payment_link.*) with HMAC verification, event-id idempotency, and Cloudflare Tunnel for local delivery.
- Built recovery pipeline: eligibility guards, Analyze (Groq / OpenAI / Gemini), Auto Payment Links policy, Approve/Execute, and merchant Recovery UI (bands, mass deploy, metrics).

Gemini Chat Application | React.js, Spring Boot, Google Gemini API 2025

- Built an AI chat client/server with Gemini API, CORS-safe Spring Boot REST endpoints, and centralized error handling.

Awcreate — Contact & Email Automation | Spring Boot, JavaMailSender 2025

- Implemented contact submission APIs and automated email notification workflows with a responsive frontend.

ACHIEVEMENTS

- Razorpay AI Buildathon (2026) — Built and submitted RecoverAI: AI failed-payment recovery with Razorpay Checkout, Payment Links, signed webhooks, and multi-provider LLM analysis (Groq / OpenAI / Gemini).
- Designed webhook-driven microservices (dual Postgres, JWT) that bridge checkout failures to merchant recovery without cross-service DB coupling.
- Open-sourced implementation & docs: github.com/pavankalyan11011/RecoveryAI.

SKILLS

Languages: Java, JavaScript, SQL, HTML, CSS

Frontend: React.js, Next.js, Redux, Redux Toolkit, React Router, Hooks, MUI, Tailwind CSS, Formik, Yup

Backend: Spring Boot, Node.js, Express.js, Feathers.js, REST APIs, JWT, Socket.io, axios

Payments & AI: Razorpay (Checkout, Payment Links, Webhooks), Groq, OpenAI, Gemini API
Data: PostgreSQL, MySQL, Oracle DB, MongoDB, Supabase
Infra & Tools: Git/GitHub, Maven, Postman, Jira, Figma, Cloudflare Tunnel, AWS basics (EC2, S3, IAM), Cursor, VS Code

EDUCATION

Avanthi Institute of Engineering <i>MCA - Master of Computer Applications</i> Hyderabad, India	2025 — 2027
University College of Science, Saifabad, Osmania University <i>BCA - Bachelor of Computer Applications - 85%</i> Hyderabad, India	2022 — 2025
Narayana Junior College <i>Intermediate - MPC - 78%</i> Hyderabad, India	2020 — 2022
Ravindra Bharathi School <i>SSC - Secondary School Certificate - 9.5 CGPA</i> Hyderabad, India	2018 — 2020
